Наша Gордость

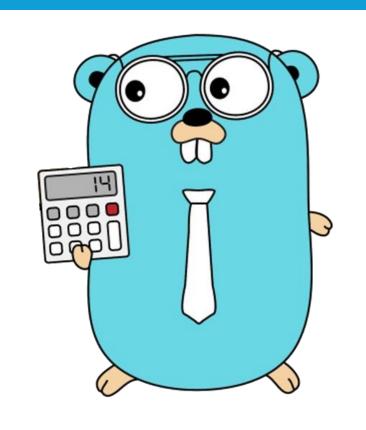

Линейная регрессия на Go против питона

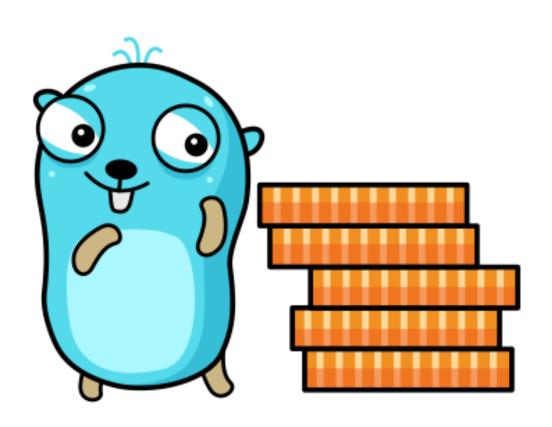

Гуров Матвей Тарасов Иван Фарафонов Егор

Почему Go?

- Быстрый
- Типизируемый
- Параллельный
- Мы его любим
- Гофер

План рассказа

- Немного про код
- Что он умеет?
- Сравнение с питоном

Наш код

```
type Loss interface {
    F(yPred, y float64) float64

    // Df is d(F)/d(Model.Predict)
    Df(yPred, y float64) float64
}
```

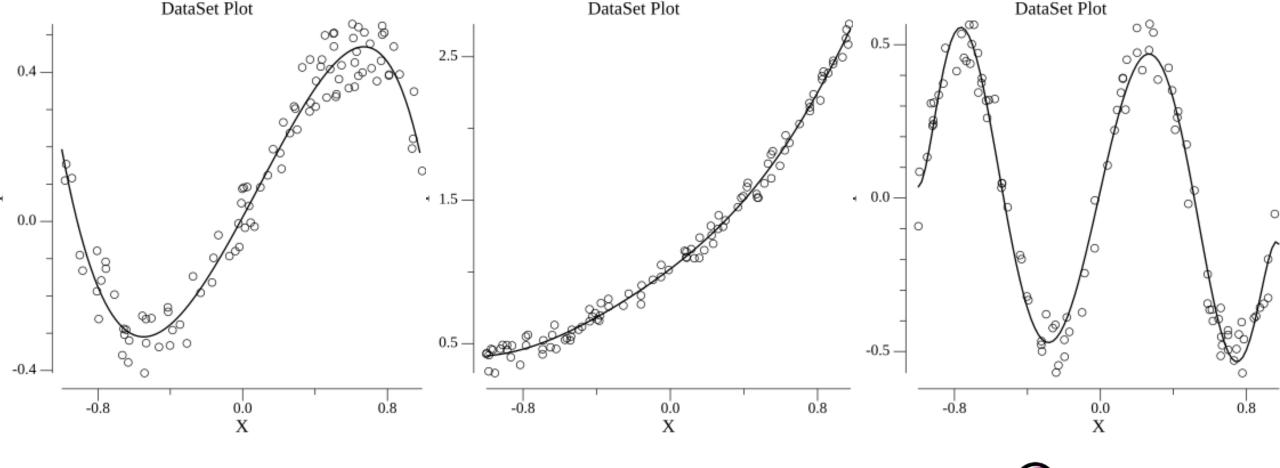

```
type Row struct {
    X mat.Vector
    Y float64
}

type DataSet interface {
    Row(idx int) Row
    Len() int
    Dim() int
}
```

```
type Trainer interface {
    Train(ml.Model, DataSet)
}
```

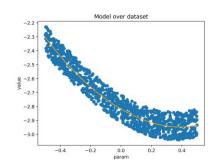

```
type Model interface {
    Predict(x mat.Vector) float64
    Config() Config
    Weights() *mat.VecDense
    SetWeights(mat.Vector)
    Bias() float64
    SetBias(float64)
    Dp(x mat.Vector) mat.Vector
type Config struct {
    RowLen int
    Loss
          Loss
          Regularizator
    Reg
    Bias
          bool
```

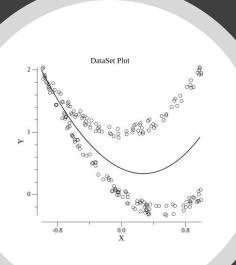

```
data, _ := training.NewSliceDatasetFromCSV("test.csv")
model := ml.NewLinearModel(ml.Config{
    RowLen: 2,
    Loss: ml.MSELoss{},
           ml.EmptyRegularizator{},
    Reg:
   Bias: true,
})
trainer := training.NewBatchTrainer(
    1000,
    10000,
    training.GeometricLearningRate(1, 0.99999),
trainer.Train(model, data)
fmt.Println(
   model.Predict(mat.NewVecDense(2, []float64{1, 2})),
```

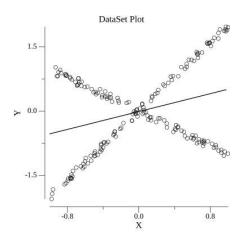

Аппроксимация полиномом
